

PRODUCT DATA SHEET

Product ID: RGA5
Description: Fall Arrest Block - 5m

Accredited to: EN 360: 1992
Web material: 28mm polyester
Case material: Alloy
Connectors: Double action high tensile steel alloy
Weight: 2kg
Max. user weight: 100kg
Max. force: <6kN
Features: Rip stitch indicator

The RGA5 is a compact, robust yet lightweight fall arrest block.

This unit does not have an integral handle, but is fitted with an alloy swivel eye for connection to an anchorage via a connector. Due to its low weight, this device is ideal for use with certain horizontal lifelines.

As a general-purpose fall arrest block, the RGA5 has proved its worth in the industry. Fitted with webbing instead of wire, this block is suited for work in and around fragile components i.e.; aircraft industry and glass lined vessels.
