

ROCKALL
SAFETY

GAS TUBE BROCHURE

2026

WHY ROCKALL SAFETY?

Competitive Pricing

We provide high-quality gas detection/safety equipment at competitive prices, delivering value on every order.

Nationwide Coverage

We provide fast delivery and responsive service across the UK, with engineers ready to assist.

Complete Product Range

We supply everything from portable and fixed detectors to calibration gas, tubes, spares, and accessories.

Expert Advice

Our experienced team provides technical advice and guidance to help you choose the right gas detection solution.

Fast Delivery

With nationwide coverage and efficient processes, we ensure quick delivery and responsive customer support.

UK's Largest Portable Reseller (Honeywell)

We're the UK's largest Honeywell Portable Gas Detection reseller, offering the best pricing.

Portable Gas

Portable gas detectors are compact devices used to detect hazardous gases in various environments.

Fixed Gas

Fixed gas detectors are permanently installed devices used to continuously monitor and detect hazardous gases in specific areas.

Escape & Rescue

Escape and rescue involve strategies and procedures to safely evacuate individuals from hazardous situations and provide aid.

Confined Space

Confined spaces are areas with limited entry and exit points not designed for continuous occupancy.

Servicing & Hire

Rockall Safety ensures your gas detector is serviced to the highest standards. Our expert team provides thorough maintenance, calibration, and repair.

Fall Arrest

Fall arrest systems are safety mechanisms designed to prevent or stop falls from heights.

DRÄGER GAS DETECTION TUBES

Introduction

Dräger-Tubes are the best example for a short-term gas measurement system, and not without good reason, for over seven decades, Dräger, the leading tube manufacturer, has perfected its “laboratory behind glass”; and the more than 100 million tubes sold in the last ten years are testimony to the satisfaction of our customers.

Today, Dräger-Tubes represent one of the classic forms of gas analysis. These versatile tubes make possible countless applications in industry, firefighting, disaster prevention, laboratory work, environmental protection and many other areas which require measurement results to be instantly available so that decisions can be made. Especially in applications in which individual measurements or low measurement frequencies are sufficient, Dräger-Tubes have advantages compared to electronic measurement equipment. They are comparatively inexpensive to purchase and very easy to use. Dräger-Tubes provide results immediately after measurement, so there is no need to send samples into a lab for analysis.

Key Benefits

During the survey stage, our expert team will visit your premises to thoroughly assess critical workplace areas, identify potential hazards, and gain a full understanding of your day-to-day operations.

In the design phase, our specialists work closely with you to develop a customised, compliant, and cost-effective gas detection system.

Our installation service is carried out by fully certified engineers who manage the complete process, including electrical integration and connection to your preferred outputs such as Siemens, PLC, or Modbus.

Once installation is complete, our commissioning process involves a full system check and test to verify performance and compliance. To ensure continued reliability, our service programme offers scheduled maintenance visits throughout the year.

DRAGER TUBE PUMP ACCURO

Dräger Tube Pump Accuro

Handy, reliable, tried and tested a million times over: the Dräger accuro. Because this one-hand pump works without a power supply, it can be used anywhere including potentially explosive areas.*

The sturdy and robust accuro pump can be easily operated using only one hand and is therefore suitable for conducting measurements at places which are difficult to access. The end of each stroke is clearly indicated.

Dräger X-Act 5000

The Dräger X-act 5000 is the new IS approved Dräger-Tube pump. It is designed for measurement with Dräger short-term tubes and sampling tubes or systems.

Ease of operation is based on the intuitive menu navigation of the different operating modes and the intelligent pump control using electronics and software. One of the key principles, is the ability to provide the required flow characteristics of the Dräger short-term tubes, reducing the average measurement time of Dräger short-term tubes that require a higher number of strokes.
